

Connecting to AirRowdy - Windows XP

8/19/2010

UTSA Office of Information Technology

Instructions for connecting to AirRowdy, the UTSA wireless network, for Windows XP laptops. This document is intended for UTSA students. Similar documents are available for UTSA faculty and staff members.

Help Connecting to AirRowdy UTSA's Wireless Network

Third party configuration applications are not supported by OIT for connection to AirRowdy. OIT recommends turning off third party configuration managers and using Microsoft Windows® to manage wireless network configuration. If you are unable to follow this step-by-step documentation to connect to AirRowdy, please visit one of the Student Computing Services Labs during regular hours for assistance.

- BB 2.01.20 (Main Campus)
- FS 2.400 (Downtown Campus)
- Library JPL Information Commons

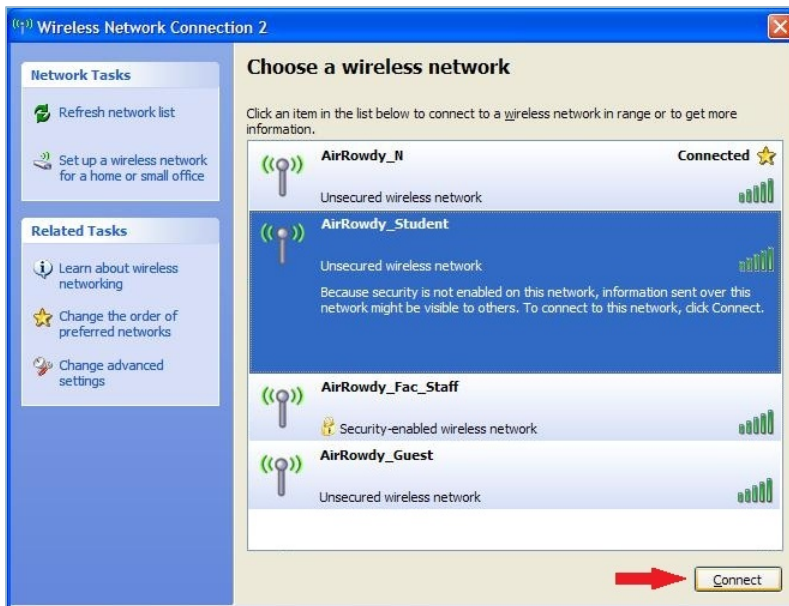

Selecting the Wireless Network

1. On your laptop's task bar, right-click the wireless network icon and choose **View Available Wireless Networks** (Figure 1). If the icon is not displayed, you can click the Wireless Networks icon in the Control Panel.

Figure 1.

Figure 2.

2. Click the **AirRowdy_Student** wireless network (SSID).

3. With AirRowdy_Student highlighted, click **Connect**. (Red arrow in Figure 2)

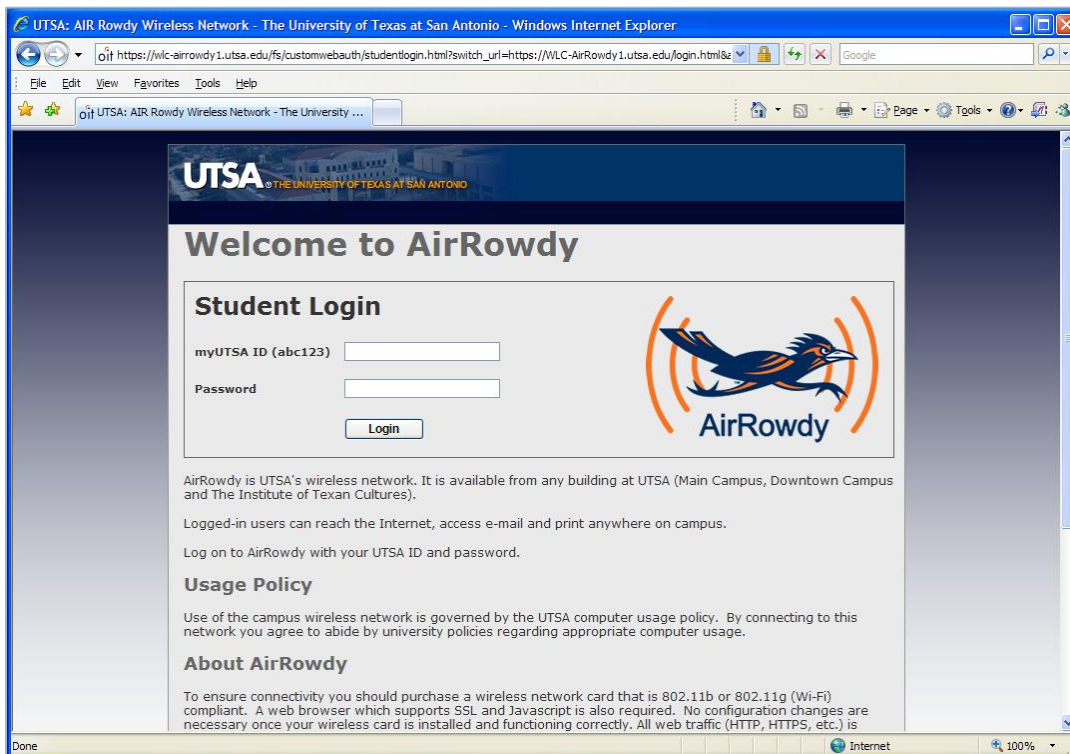

NOTE: If you see a message about not transmitting sensitive data over the wireless connection (Figure 3), click **Connect Anyway**.

Figure 3.

4. Open a Web browser (Internet Explorer, Firefox, etc.) and you will be redirected to the AirRowdy login page (Figure 4).

Figure 4.

5. Enter your myUTSA ID (abc123) and password.
